# Table of Contents

# Safety Precautions

*To avoid personal injury, instrument damage and/or damage to your vehicle; do not use the VAG401 before reading this manual.*

This manual describes common test procedures used by experienced service technicians. Many test procedures require precautions to avoid accidents that can result in personal injury, and/or damage to your vehicle or test equipment. Always read your vehicle's service manual and follow its safety precautions before and during any test or service procedure. **ALWAYS** observe the following general safety precautions:

- When an engine is running, it produces carbon monoxide, a toxic and poisonous gas. To prevent serious injury or death from carbon monoxide poisoning, operate the vehicle ONLY in a well-ventilated area.
- To protect your eyes from propelled objects as well as hot or caustic liquids, always wear approved safety eye protection.
- When an engine is running, many parts (such as the coolant fan, pulleys, fan belt etc.) turn at high speed. To avoid serious injury, always be aware of moving parts. Keep a safe distance from these parts as well as other potentially moving objects.
- Engine parts become very hot when the engine is running. To prevent severe burns, avoid contact with hot engine parts.
- Before starting an engine for testing or trouble-shooting, make sure the parking brake is engaged. Put the transmission in park (for automatic transmission) or neutral (for manual transmission). Block the drive wheels with suitable blocks.
- Connecting or disconnecting test equipment when the ignition is ON can damage test equipment and the vehicle's electronic components. Turn the ignition OFF before connecting the VAG501 to or disconnecting the VAG401 from the vehicle's Data Link Connector (DLC).
- To prevent damage to the on-board computer when taking vehicle electrical measurements, always use a digital multimeter with at least 10meg Ohms of impedance.
- Fuel and battery vapors are highly flammable. To prevent an explosion,

keep all sparks, heated items and open flames away from the battery and fuel / fuel vapors. DO NOT SMOKE NEAR THE VEHICLE DUR-ING TESTING.

● Don't wear loose clothing or jewelry when working on an engine. Loose clothing can become caught in the fan, pulleys, belts, etc. Jewelry is highly conductive, and can cause a severe burn if it makes contact between a power source and ground.

# About VAG401

## 1. Applications

***VAG401 is the higher version based on VAG5053 with powerful function. It can work on VW, AUDI, SEAT and SKODA. With its smart appearance and powerful function, it can be conveniently used and can be run detachedly without PC.***

## 2. Available Functions
- Controller Info
- Fault Codes
- Clear Codes
- Measure Blocks
- Output Tests
- Basic Settings
- Adaptation
- Coding
- Security Access
- Readiness
- Advanced ID

## 3. Supported Systems
VAG401 can support the following systems:
- Engine
- Auto Trans
- ABS Brakes
- Auto HVAC
- Cent. Elect.
- Airbags
- Steering wheel
- Instruments
  With other systems totally over tens here not listed one by one.

## 4. Professional function.
- Oil Reset
- Srs Reset
- Throttle Adaption
- Mileage Reset
- EEPROM Access

## 5. Main features

- Display: Backlit LCD,160*160 pixel display.
- Favorable----about only 10% of that of professional tool.
- Powerful function-----with all the function of VAG1551/1552.
- Conveniently connection and simply operation.
- Powered via diagnostic connector, no need of power exteriorly charged.
- Operating Temperature: -20℃ to 50℃ .
- Storage Temperature: -50℃ to70℃ .

## 6. Appearance and Key Descriptions

The appearance of a VAG401 is as shown in the above figure.

1. LCD screen: 160*160
2. Enter key:   confirm selection and enter
3. Esc key:      go back to the previous screens
4. up/down arrows:   moves the selection pointer and scrolls up or down
5. LEFT/RIGHT arrows:   move cursor.
6. Diagnostic extension cable:   OBDII -16PIN

# Operation Instructions

## 1. Preparation for Testing

The VAG401 aids in monitoring electronic and emissions-related faults in your vehicle and retrieving fault codes related to malfunctions in these systems. Mechanical problems such as low oil level or damaged hoses, wiring or electrical connectors can cause poor engine performance and may also cause a "false" fault code. Fix any known mechanical problems before performing any test. See your vehicle's service manual or a mechanic for more information.

**Check the following areas before starting any test:**

- Check the engine oil, power steering fluid, transmission fluid (if applicable), engine coolant and other fluids for proper levels. Top off low fluid levels if needed.
- Make sure the air filter is clean and in good condition. Make sure all air filter ducts are properly connected. Check the air filter ducts for holes, rips or cracks.
- Make sure all engine belts are in good condition. Check for cracked, torn, brittle, loose or missing belts.
- Make sure mechanical linkages to engine sensors (throttle, gearshift position, transmission, etc.) are secure and properly connected. See your vehicle's service manual for locations.
- Check all rubber hoses (radiator) and steel hoses (vacuum/fuel) for leaks, cracks, blockage or other damage. Make sure all hoses are routed and connected properly.
- Make sure all spark plugs are clean and in good condition. Check for damaged, loose, disconnected or missing spark plug wires.
- Make sure the battery terminals are clean and tight. Check for corrosion or broken connections. Check for proper battery and charging system voltages.
- Check all electrical wiring and harnesses for proper connection. Make sure wire insulation is in good condition, and there are no bare wires.
- Make sure the engine is mechanically sound. If needed, perform a compression check, engine vacuum check, timing check (if applicable), etc.

## 2. Connect the VAG401

2.1 Turn the ignition on.

2.2 Locate the vehicle's 16-pin Data Link Connector (DLC).

2.3 Connect the VAG401 cable connector to the vehicle's DLC. Turn on the ignition, The VAG401 will auto start, the following screen will be displayed.

2.4 Wait a moment, the screen will auto display the main menu:

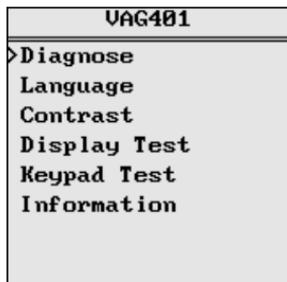

- **[Diagnose]**: diagnose
- **[Language]**: language select
- **[Contrast]**: Contrast adaptation
- **[Display Test]**: Lcd test
- **[Keypad Test]**:Keypad test
- **[Information]**:show version

## 3. Diagnosis system

Select [Diagnosis system] and then press [enter] key. The screen will display the system selection menu as follow:

```
┌─────────────────────────┐
│        VAG401           │
├─────────────────────────┤
│>V1.0                    │
│                         │
│                         │
│                         │
│                         │
│                         │
│                         │
└─────────────────────────┘
```
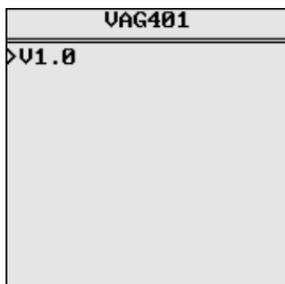

Now we can select a version, then press [Enter]. The screen will display as the following shows.

```
┌─────────────────────────┐
│        V1.0             │
├─────────────────────────┤
│>Common                  │
│ Drivetrain              │
│ Chassis                 │
│ Comfort/Conv.           │
│ Electronics 1           │
│ Electronics 2           │
│ Special Function        │
└─────────────────────────┘
```
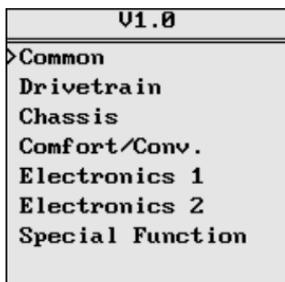

Systems that the VAG401 supports are listed as the following 7 ones. Each system in the 7 kinds comes with similar operation method. Press [Common], then press [Enter].The screen will show the systems most cars shares. See the following.

```
┌─────────────────────────┐
│        Common           │
├─────────────────────────┤
│ 01-Engine               │
│ 02-Auto Trans           │
│ 03-ABS Brakes           │
│ 08-Auto HVAC            │
│ 09-Cent. Elect.         │
│ 15-Airbags              │
│ 16-Steering wheel       │
│>17-Instruments          │
└─────────────────────────┘
```
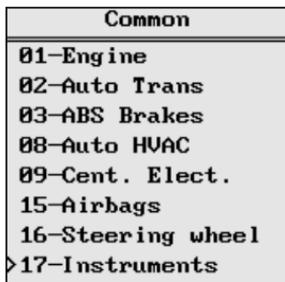

Now we can select any one system, say, selecting [17-Instruments], then press [Enter]. The screen will display as the following shows.

```
┌─────────────────────┐
│   17-Instruments    │
├─────────────────────┤
│                     │
│                     │
│                     │
│    Connecting...    │
│                     │
│                     │
│                     │
└─────────────────────┘
```
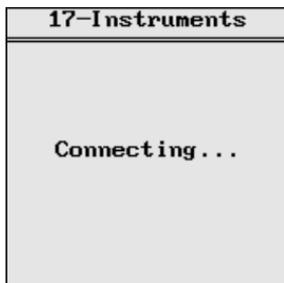

If it runs successfully, then the following will be displayed.

```
┌─────────────────────┐
│   17-Instruments    │
├─────────────────────┤
│>VAG Number:1KD92085 │
│3                    │

└─────────────────────┘
```
If failed, then it displays the following.

```
 17-Instruments

 Failed to connect!

```
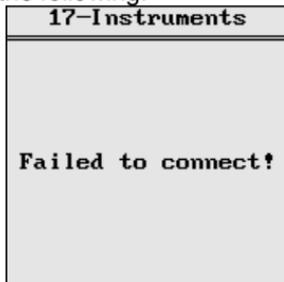

## 3. 1 READ ECU version

Select [01.READ ECU version] and then press [Enter] key. The screen will display the control unit information:

```
 01-Controller Info              17-Instruments

                             >VAG Number:1KD92085
                              3
                              Component:KOMBI INS-
 Reading system inf-          TRUMENT 5GS 1610
     ormation...              Shop#Imp:000
                              Extra:Geraet00000
                              COD:0003103
                              WSC:00000
```
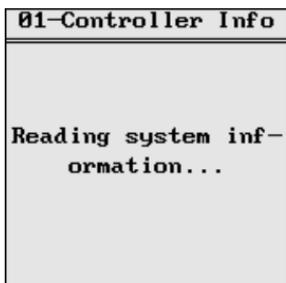

## 3.2 Read Fault Codes

Select [02-Fault Codes] and then press [Enter] key. The screen will show the error code and you can press up or down key to check out each error code as the following.

```
 02-Fault Codes                  02-Fault Codes

                             >00779           1/4
                              Outside Air Temp S-
                              ensor (G17)
 Trouble Codes: 4             010 Open or Short -
                              to Plus

```
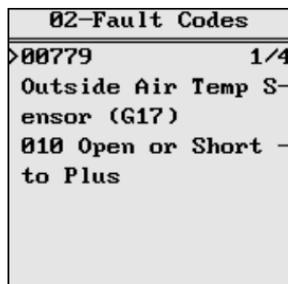

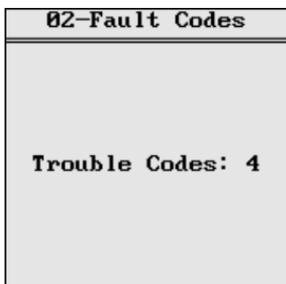

### 3.3 Erase fault codes

Select [05-Clear Codes] and then press [Enter] as the following.

```
┌─────────────────────────────┐
│     05-Clear Codes          │
├─────────────────────────────┤
│                             │
│                             │
│   Do you want to era-       │
│   se all the fault c-       │
│         ode(s)?             │
│                             │
│                             │
└─────────────────────────────┘
```
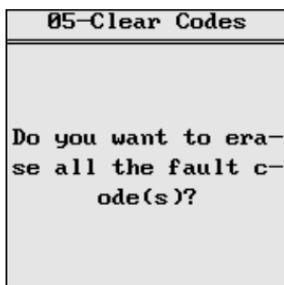

You need to press [Enter] button for the second time to perform "code erase". Of course you can also press [Esc] button to give u. If code erasing successfully, it will display as the following.

```
┌─────────────────────────────┐
│     05-Clear Codes          │
├─────────────────────────────┤
│                             │
│                             │
│   Erase fault code(s)       │
│      successfully!          │
│                             │
│                             │
└─────────────────────────────┘
```
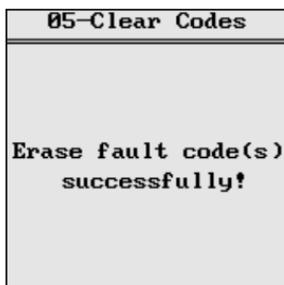

### 3.4 Read measuring data value

Select [08-Measure Blocks] and then press Enter as the following.

```
┌─────────────────────────────┐
│     08-Measure Blocks       │
├─────────────────────────────┤
│                             │
│                             │
│   Input group(0-255)        │
│                             │
│                             │
├─────────────────────────────┤
│            002              │
└─────────────────────────────┘
```
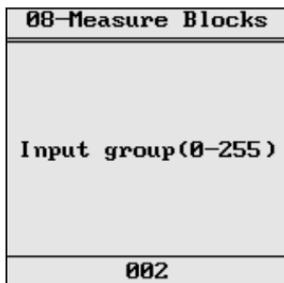

Press the left / right to choose the number of places, by up / down button to select the input number and press [Enter] button to confirm. Figure shows that：

```
     Group:002
        20000.00 km
           0.00 l
        510.00 ohm
        -50.00 ℃
```

## 3.5 Output test.
Select [03-Output Test] and then press [Enter]. If failed, it will display as the following.
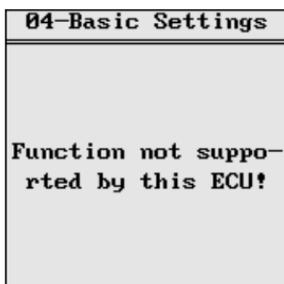

```
    03-Output Tests

Tachometer (G5)
                ____
```

If succeeded, it will display as the following.

```
    03-Output Tests

Tachometer (G5)
                OK
```

### 3.6 Basic items setting.

Select [04-Basic Settings] and then press [Enter]. The way of operating likes that of point 3.4 regarding of measuring data value.

```
 04-Basic Settings

 Function not suppo-
  rted by this ECU!

```

### 3.7 Route adaptation

Select [10-Adaptation] and then press [Enter]. The way of operating likes that of point 3.4 regarding of measuring data value.

```
 10-Adaptation

 Input group(0-255)

      020
```

```
 10-Adaptation

 Function not suppo-
  rted by this ECU!

```
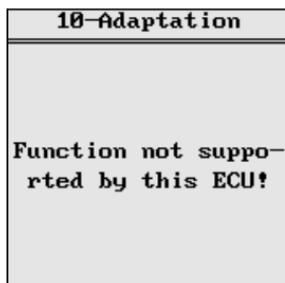

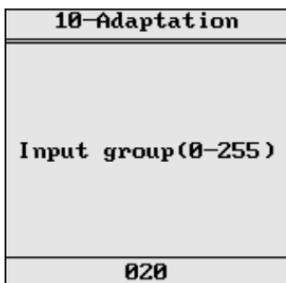

### 3.8 Coding

Select [07-Coding] and then press [Enter].It will display as the following.

```
 07-Coding

 Input Software cod-
        ing:

    00003103
```
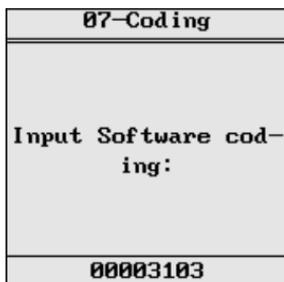

Press Left or Right key to choose the number of places; by Up or Down key to input number. Press [Enter] button to confirm.

```
┌─────────────────────────┐
│       07-Coding         │
├─────────────────────────┤
│                         │
│                         │
│  Input Equipment Nu-    │
│         mber :          │
│                         │
│                         │
├─────────────────────────┤
│       10000000          │
└─────────────────────────┘
```

After all information written, press [Enter]. If operation is successful, it will display as the following.

```
┌─────────────────────────┐
│       07-Coding         │
├─────────────────────────┤
│                         │
│                         │
│  successfully write-    │
│  Coding!                │
│                         │
│                         │
│                         │
└─────────────────────────┘
```

## 3.9 Login the system
Choose [16-Security Access] and then press [Enter] button. It shows as the following

```
┌─────────────────────────┐
│   16-Security Access    │
├─────────────────────────┤
│                         │
│                         │
│    Input password:      │
│                         │
│                         │
│                         │
├─────────────────────────┤
│       11000             │
└─────────────────────────┘
```

Press left/right button to choose number of places. Press up/down button to enter the passing code and then press [Enter].The following will be

displayed if you login successfully.

```
┌─────────────────────────┐
│ 16-Security Access      │
├─────────────────────────┤
│                         │
│                         │
│ successfully login!     │
│                         │
│                         │
│                         │
└─────────────────────────┘
```
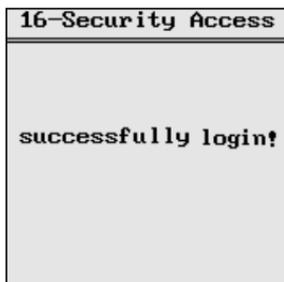

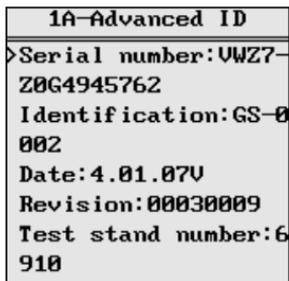

If failed, it shows as the following.

```
┌─────────────────────────┐
│ 16-Security Access      │
├─────────────────────────┤
│                         │
│                         │
│ Failed to communica-    │
│ te!                     │
│                         │
│                         │
└─────────────────────────┘
```
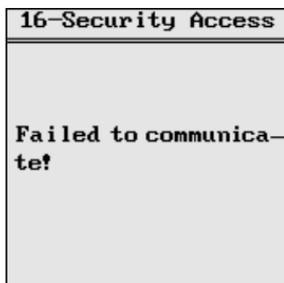

## 3.10 Advanced ID

Choose [1A-Advanced ID] and then press [Enter] button. It shows as the following.

```
┌─────────────────────────┐
│    1A-Advanced ID       │
├─────────────────────────┤
│>Serial number:VWZ7-     │
│ Z0G4945762              │
│ Identification:GS-0     │
│ 002                     │
│ Date:4.01.07V           │
│ Revision:00030009       │
│ Test stand number:6     │
│ 910                     │
└─────────────────────────┘
```

Press [Esc] to draw out.

### 3.11 System being ready
Press [15-Readiness] and then press [Enter], it shows as the following.

```
 15-Readiness

Function not suppo-
  rted by this ECU!

```
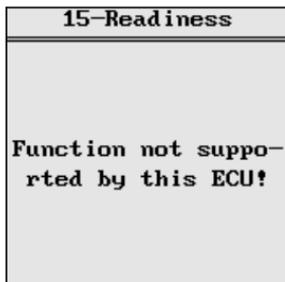

Press [Esc] to login out.

### 3.12 Professional function
Return to the main memu, choose [Diagnose] and then press [Enter]. Press
right arrow to go to the next page. Choose [Special Function]. Press [Enter].
It will show the following.

```
  Special Function
>Oil Reset
 Srs Reset

```
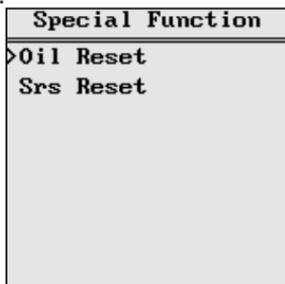

**3.12.1** Choose [Oil Reset] and press [Enter]. it shows as the following:

```
    Oil Reset

    Connecting...

```
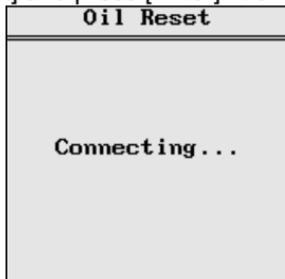

If connect successfully, it displays the following one by one.

```
┌─────────────────────────────┐
│         Oil Reset           │
├─────────────────────────────┤
│                             │
│                             │
│          Finish             │
│                             │
│                             │
│                             │
└─────────────────────────────┘
```
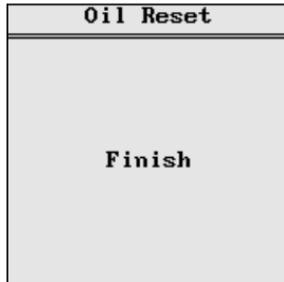

Press [Esc] to draw out.

**3.12.2** Choose [Srs Reset] and [Enter], it shows as the following.

```
┌─────────────────────────────┐
│         Srs Reset           │
├─────────────────────────────┤
│                             │
│                             │
│        Connecting...        │
│                             │
│                             │
│                             │
└─────────────────────────────┘
```
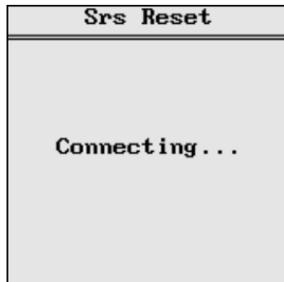

If connected successfully, it will read code before it returns to the original; if it finds error code, it will display the following.

```
┌─────────────────────────────┐
│         Srs Reset           │
├─────────────────────────────┤
│                             │
│  Clear DTC First! Do-       │
│  you want to result-        │
│  Forcible?                  │
│                             │
│                             │
└─────────────────────────────┘
```
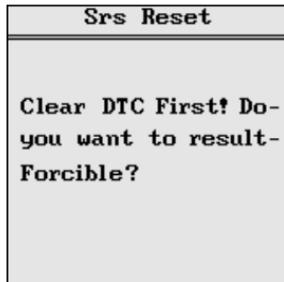

Then, press [Enter] and it will force the implementation of reset command and will display as the following after success.

```
┌─────────────────────────────┐
│         Srs Reset           │
├─────────────────────────────┤
│                             │
│                             │
│           Finish            │
│                             │
│                             │
│                             │
└─────────────────────────────┘
```
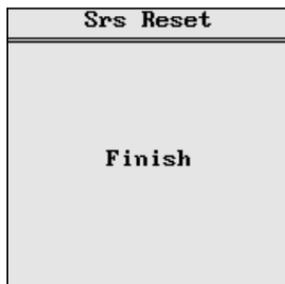

If you don't want to force the implementation of reset command, please press [Esc] to draw out. After finishing code erasing, you can reset airbag.
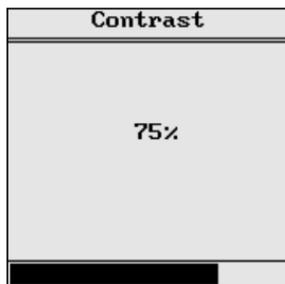

## 4. Language select

Choose [Language] at the main memu. Then press [Enter]. The screen will display as the following.

```
┌─────────────────────────────┐
│         Language            │
├─────────────────────────────┤
│ >English                    │
│  Geman                      │
│  Italian                    │
│  Russian                    │
│  French                     │
│  Portuguese                 │
│  Polski                     │
│  Greek                      │
└─────────────────────────────┘
```

## 5. Contrast value adaptation

Choose [Contrast] at the main memu. Then press [Enter]. The screen will display as the following.

```
┌─────────────────────────────┐
│         Contrast            │
